Group Members

Add Provider

ID	Provider Name	Role	Specialty	Primary	Multiple Group
----	---------------	------	-----------	---------	----------------

1) Allow the access to add contact without it needing to be associated to a group.
Currently if you search for the contact, it will let you select, but it won't add in the provider unless a group is added.

Consider adding a "Third Party(ies)" Tab, which would function similarly to the records/Request Tab, allowing Contacts to be added in/removed individually. This would help when companies make changes and instead of editing every group and the contact the group is associated with, the third parties can be changed individually as needed.
